What Is H.E.L.P. (4357) ?

H.E.L.P. (selcall 4357) is Austravel Safety Net's simple, safe and sure pathway to attaining help and assistance in remote areas of Australia using a HF radio when no other means of emergency communication is available. A **P**ersonal **L**ocator **B**eacon (PLB) can summon help, but is not able to communicate your actual requirements.

Austravels' H.E.L.P. (4357) system is designed specifically for experienced and inexperienced HF radio users alike; delivering a "no fuss" method of attaining help in remote areas of Australia.

Underpinned by Austravels' new Telcall+ technology platform (*see separate info leaflet*) Telcall+ equipped and re-profiled HF radios unlock the true potential of the Austravel HF radio network and its range of innovative HF radio services - raising the level of emergency call responsiveness and assurance in times of need.

All H.E.L.P. calls are free to all Austravel members and is covered within the annual membership fee structure....however, Telcall+ subscription is a suggested addition that enhances the H.E.L.P. (4357) system with GPS coordinates.

Using suitable HF radios, a successful H.E.L.P. (4357) Selcall or "Send GPS Position" call from your HF radio, triggers the new automated system into action, by sending an "emergency response required" SMS to several Austravel base operators simultaneously.

> Emergency 4357 call from mobile 1226 Perth Base. Channel: 02. Last known position just now Lat:-32.949184 Lon:115.910919 Geoff Peck (QLD), please initiate Emergency Response Procedure

Automated H.E.L.P. SMS Example

The reliance on one person only responding to your HF radio H.E.L.P. call is gone....several specialist Austravel base operators are all informed at the same time - providing swift responses and actions to emergency HF radio call situations.

No other HF network system works more reliably than having an **experienced** Austravel base operator speaks with you one-on-one via a HF radio telephone connection.

Refer to separate Terms & Conditions

Emergency calls...... no one wants to be in a situation where you need help in a hurry.

Travelling in remote areas of Australia doesn't come without some risks. Planning against those risks for yourself is one thing, how about those unforeseen situations you never thought could happen that doesn't necessarily involve you.?

The most affordable and innovative HF radio H.E.L.P. system is now available through Austravel Safety Net Inc.

- Updated base infrastructure
- Attentive base operators
- Integrated GPS and SMS services designed to assist in times of need.
